PROJECT NAME	PocketSmart AI: Your Smart Budget & Recommendation Assistant

Phase 08: Project Demonstration

1. Introduction

This document is the presentation script for PocketSmart AI. The demonstration runs for about 10 minutes and follows the sequence shown below.

No.	Demonstration topic	What is shown
1	Introduction	Problem, idea and objective of PocketSmart AI
2	Home page	Landing page, features and planner cards
3	Register / Login	Account creation, secure login and dashboard
4	Home Planner	Budget input and home interior recommendations
5	Party Planner	Budget split for catering, decoration and entertainment
6	Jewelry Planner	Occasion, style and outfit image based suggestions
7	History	Saved plans and full details
8	Technical explanation	Architecture, technologies and working flow
9	GitHub	Source code repository and project files

1.1 Introduction Script

Say: Planning a purchase or an event across many websites is confusing and it is easy to overspend. PocketSmart AI solves this. The user enters one budget and a few preferences, and Gemini 2.5 prepares a complete plan with estimated prices and shopping links for platforms such as Amazon, Flipkart, IKEA, Swiggy, Zomato and OYO.

1.2 Pre-demonstration Checklist

- Valid API key in the .env file and internet connection working.
- Server started and the browser open at <http://localhost:8000>.
- A test account and a sample outfit image ready.
- Backup screenshots or a screen recording in case of a network problem.

2. Home Page

Say: This is the landing page. It introduces the three smart budget planners, shows what users say about the product and offers Sign In and Get Started buttons.

- Point out the navigation bar: Features, Testimonials, Sign In and Get Started.
- Point out the three planner cards: Home Interior, Party and Jewelry.

3. Register / Login

Say: New users create an account with username, email and password. Passwords are stored in hashed form, and after login a secure token is kept in an HTTP-only cookie.

Say: After login the dashboard shows the three planners and my recent activity.

4. Home Planner

Sample input: budget 5000, lights 5, ceiling fans 4, furniture 2, dining tables 1, Living Room and Kitchen selected.

The screenshot shows a web browser window with the URL 127.0.0.1:8000/home-planner. The page title is "PocketSmart AI". The main heading is "Home Interior Budget Planner". Below the heading is a sub-heading "Enter your room requirements and let PocketSmart AI create a budget-aware plan." The form contains several input fields: "Budget (₹)" with a value of 5000, "Room type" with a dropdown menu showing "Living Room", "Lights" with a value of 5, "Ceiling fans" with a value of 4, "Dining tables" with a value of 2, and "Style" with a dropdown menu showing "Modern". There is also a "Notes" section with a text area containing "Any special requirements?". At the bottom of the form is a blue button labeled "Generate Plan".

Figure 1: Home planner input form

Point out: the budget summary, allocation for each category, item prices and quantities, the remaining budget and the shopping buttons for Amazon, Flipkart, IKEA, Myntra and Ajoio.

5. Party Planner

Sample input: budget 5000, 3 guests, wedding, home venue, catering and entertainment selected.

The screenshot shows a web browser window with the URL 127.0.0.1:8000/party-planner. The page title is "PocketSmart AI". The main heading is "Party Budget Planner". Below the heading is a sub-heading "Allocate your event budget across food, venue, decoration and buffer." The form contains several input fields: "Budget (₹)" with a value of 5000, "Guests" with a value of 3, "Event type" with a dropdown menu showing "Birthday", "Venue" with a dropdown menu showing "Flexible", and "Food preference" with a dropdown menu showing "Mixed". There is also a "Notes" section with a text area. At the bottom of the form is a blue button labeled "Generate Plan". A small inset window titled "Snipping Tool" is visible in the bottom right corner, showing a message: "Screenshot copied to clipboard. Automatically saved to screenshots folder. Mark-up and share".

Figure 2: Party planner input form

Point out: the budget is divided into venue, catering, entertainment and contingency; the shopping platforms change by category (Swiggy and Zomato for catering, BookMyShow for entertainment).

6. Jewelry Planner

Sample input: budget 5000, occasion Birthday, with an outfit photo uploaded.

A screenshot of a web browser showing the 'Jewelry Budget Planner' form. The browser's address bar shows '127.0.0.1:8000/jewelry-planner'. The page has a navigation bar with links: Home, Party, Jewelry, Dashboard, History, and Login. The form itself is titled 'Jewelry Budget Planner' and includes a subtext: 'Optionally upload an outfit image for visible color and style matching.' The form fields are: 'Budget (₹)' with a text input, 'Occasion' with a dropdown menu showing 'Wedding', 'Style' with a dropdown menu showing 'Elegant', 'Outfit color' with a text input showing 'e.g. navy blue', 'Outfit image' with a 'Choose File' button and 'No file chosen' text, and 'Notes' with a text area. At the bottom of the form is a blue button labeled 'Generate Recommendations'.

Figure 3: Jewelry planner with outfit image upload

Point out: the outfit analysis (colours, style and formality), the matching jewelry items with prices and the styling tips.

7. History

Say: Every plan is saved automatically. The history page lists past plans with date, total budget and remaining budget, and View Full Details opens the complete result.

A screenshot of a web browser showing the 'Recommendation History' page. The browser's address bar shows '127.0.0.1:8000/history'. The page has a navigation bar with links: Home, Party, Jewelry, Dashboard, History, and Login. The main content area is titled 'Recommendation History' and lists three entries. Each entry shows a title (e.g., 'JEWELRY · 2026-09-29 15:54:15'), a message ('A local fallback plan was generated because the Gemini request was unavailable (ValueError).'), and a count of recommendations (e.g., '4 recommendations'). A small inset window titled 'Snipping Tool' is visible in the bottom right corner, showing a screenshot of the 'Jewelry Budget Planner' form and a message: 'Screenshot copied to clipboard. Automatically saved to screenshots folder. Mark-up and share'.

8. Technical Explanation

Component	Explanation
Frontend	HTML, CSS and JavaScript pages rendered with Jinja2 templates; forms send data to the backend and results are shown as cards and tables.
Backend	FastAPI application with routes for login, planners, history and sessions; CORS enabled; static files served for styling and uploads.

Component	Explanation
AI layer	Google Gemini 2.5 receives a structured prompt (and the outfit image for jewelry) and returns a JSON plan with categories, items, prices and search terms.
Recommendation logic	The backend extracts the JSON, calculates totals and remaining budget, and adds shopping links chosen for each category.
Security	bcrypt password hashing, signed access tokens with 30-minute expiry, HTTP-only cookies, token blacklist on logout, and an environment file for keys.
Data	Users, sessions and history are held in memory in the demonstration; DynamoDB and S3 are proposed for the cloud version.

8.1 Working Flow

- User logs in and opens a planner.
- The form data is sent to the FastAPI route.
- The prompt is prepared and sent to Gemini 2.5.
- The AI answer is converted into a plan with calculations and shopping links.
- The plan is saved in history and displayed to the user.

8.2 Expected Questions and Answers

Question	Answer
Which AI model is used?	Google Gemini 2.5, which understands both text and images.
Are the prices real?	They are AI estimates for planning. The links open live searches on each platform.
How is the budget respected?	Strict prompt rules and backend calculation of totals and the remaining budget.
What is next?	Database storage, live prices, more planners and cloud deployment.

9. GitHub

The complete source code of PocketSmart AI is stored in a GitHub repository so that reviewers can view, download and run the project.

Item	Details
Repository link	[Paste your GitHub repository link here]
Main files	Application file, templates folder, static folder, requirements list, README
Not uploaded	The .env file with the API key is kept out of the repository
README contents	Project description, features, technologies, setup steps and screenshots

Conclusion

PocketSmart AI turns one budget into a complete, platform-aware plan for home, party and jewelry needs. It shows how GenAI can simplify everyday decisions while staying secure, modular and easy to use.
